A world map showing projected temperature changes under different climate scenarios. The map uses a color scale from blue (cooling) to red (warming). Most of the globe is colored in shades of yellow, orange, and red, indicating significant warming, particularly over land and in the high northern latitudes. The text is overlaid on the map.

*“Education means making creators.”*

- Jean Piaget

# Learning by doing

Hacking UN’s IPCC’s Climate report

Young students from Semantic\*Climate

Shweata N. Hegde

3<sup>rd</sup> year Undergrad (Life Science  
and Education)

\*Machine understandable

A horizontal color scale bar at the bottom of the slide, corresponding to the temperature change projections on the map. It shows a gradient from blue (cooling) on the left to red (warming) on the right, with intermediate colors like light blue, green, yellow, and orange.

# IPCC reports – most important document ever!

- 3000 pages;
- technical
- not editable

I can't  
read all of  
that!

But it's the  
most important  
document ever

Computers  
can help!

# Machines can help, but...

# Machines can help, but...

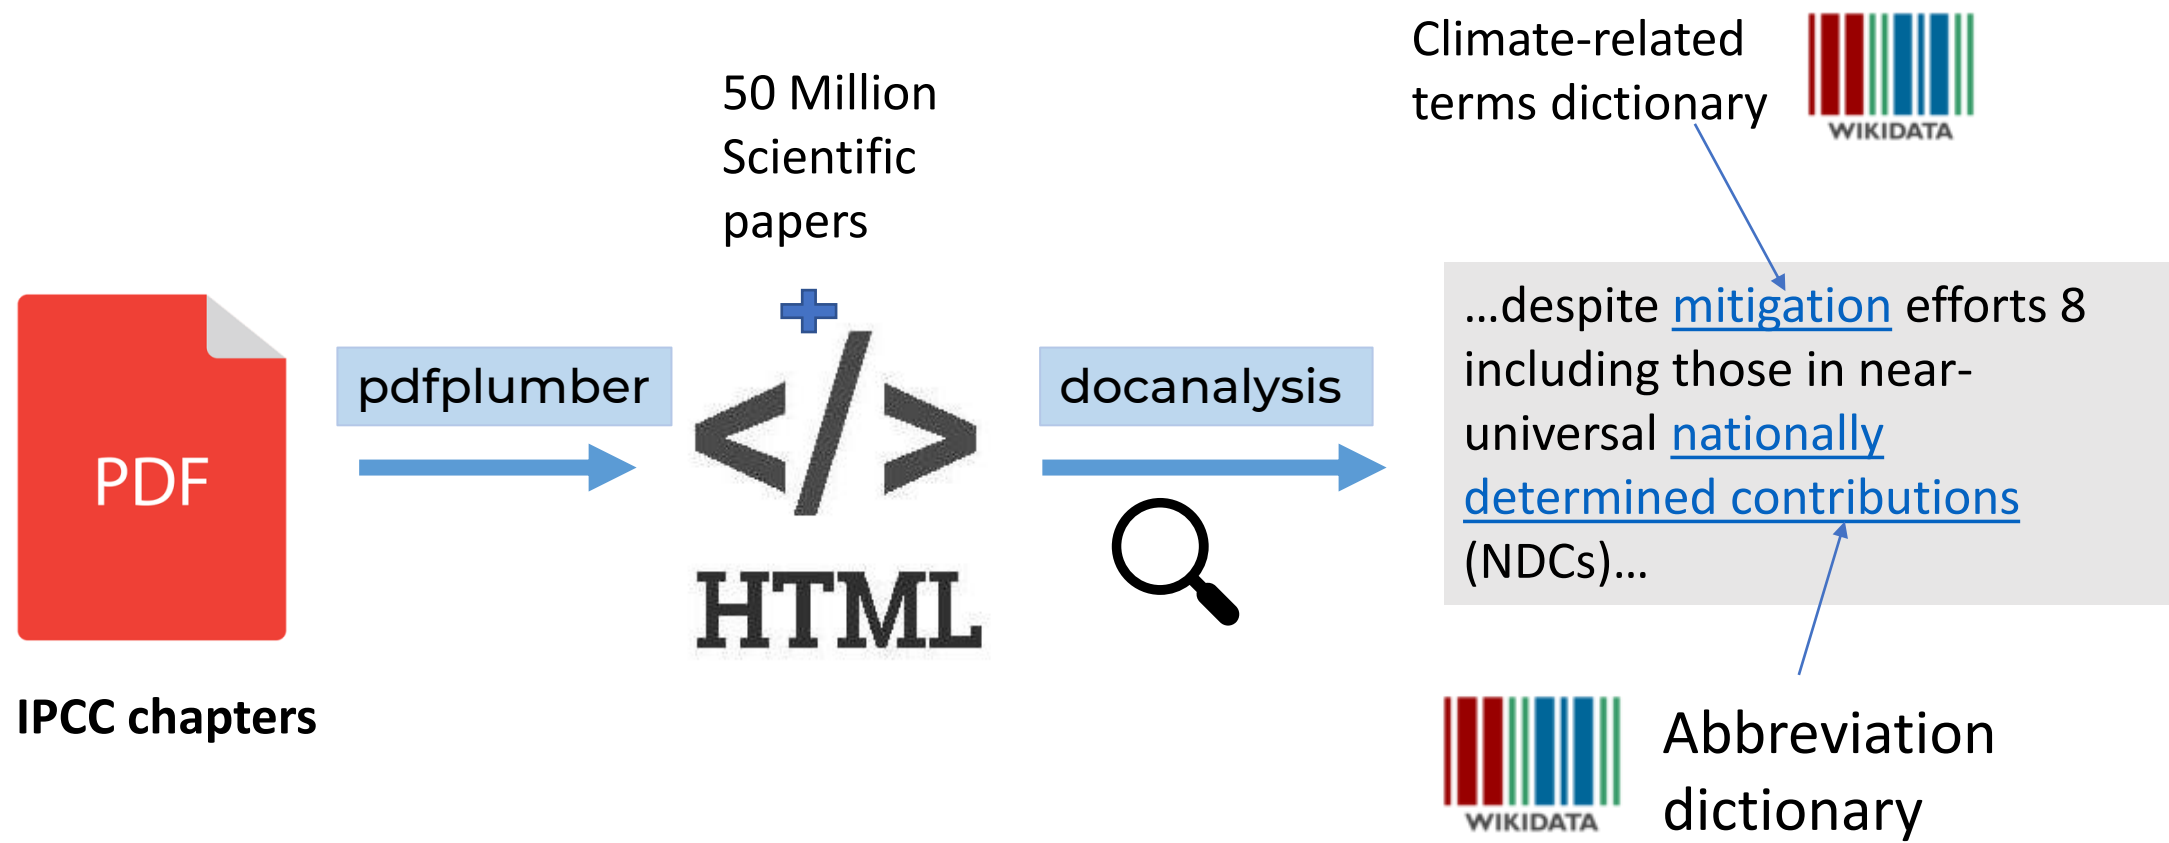

They can't  
make sense of  
PDF

But Semantic  
Climate Team  
can help!

Really?
